CHARLIE EVANS TESTS POSITIVE FOR COVID

Charlie Evans, even though vaccinated, has tested positive for COVID19 after attending a meeting at his country club. Several others were infected, including staff, and tested positive after developing symptoms.

Charlie indicates that his symptoms are mild; coughing, sniffing. He and his wife, Pat, will be tested again this weekend.

Charlie served seven terms in the Texas House of Representatives from Tarrant County from 1973-1987.

PLATFORM

We have started our subcommittee on platforms checking out SLACK. I like that from the start because Dick Slack was a fellow member and a great guy.

We invited twenty four members to work on this and so far 10 have responded.

Lee Jackson as you would expect, has picked up the ball. I hope this platform works because email doesn't. There are a lot of platforms but frankly the choices are less than a dozen and Facebook isn't one of them –I don't think.
